January 3rd, 2019 - The aim of Cytotoxic Drug Resistance Mechanisms is to provide pro cols that are appropriate for examining the mechanisms of cellular resistance to anticancer cytotoxics in human tumor samples Tumor cell lines have been enormously useful as experimental models of drug resistance mechanisms however they have limitations and we need to address the relevance of such mechanisms in patients tumors Examining drug resistance in tumors is much more problematic than in cell lines

January 3rd, 1996 - Several of the mechanisms underlying drug resistance to cytotoxic drugs have been elucidated in the last two decades largely by employing in vitro drug selected cancer cell lines In unselected cell lines and probably also in human cancer multiple mechanisms are redundantly present to defend the organism from the insults of drugs Mechanisms have been unraveled by which cross resistance ensues to multiple drugs multidrug resistance similar to what is commonly seen in patients More
